

Chapter 11. OUR TRADE ASSOCIATION
PROPOSAL (§ 524ff.)

	Par.	Page
Their present activity, and why so limited.....	524-30	165
British subsidy of such activity.....	529, 30	166
A new plan for the support of invention.....	531-40	166
The merits of the plan.....	541-8	170
1. Unlimited funds.....	541	170
2. Patent pooling.....	542	171
3. No discouragement of novelty.....	543	171
4. An end to duplication.....	544	171
5. Management by industry.....	545	171
6. Small firms enlisted.....	546	171
7. Costs of patent system saved.....	547	172
8. The trends.....	548	172
Objections to our plan:		
1. That it would use the patent system to destroy it.....	549, 550	172
2. That it proposes monopoly. Actually it combats monopoly, between firms. In any case, monopoly has been more inventive than competition.....	551-7	172
3. That it is unconstitutional.....	558	175
4. That unlimited funds is unheard of and uneconomic.....	559-63	175
5. That trade association inventing has been tried and found trivial.....	563, 5	176
Conspectus.....	564-7	176
Approvals of the plan or of related ideas.....	568-73	177

Chapter 12. THE NATURE OF INVENTION AND OF
INVENTORS (§ 574ff.)

The supreme problem of psychology and of mankind is how to discover new truths. Invention is hard.....	574-8	179
A principal reason is the ambivalence of knowledge, obviously needed, yet leading the mind along stale paths.....	579, 580	180
Some immediate remedies, for solving the puzzles of invention.....	581-94	181
Brainstorming.....	584, 5	182
Other nonlogical methods of invention: empiricism, checklists, generalization, accident.....	589-94	184
Returning to the logical—accurate formulation, documentation.....	595-8	185
What sort of minds are needed?.....	599-605	186

Chapter 13. THE NURTURE OF INVENTION (§ 607ff.)

The often humble, and usually unscientific homes of potential scientists demand help and special encouragement.....	608, 9	191
Creatives at odds with ordinary teachers, yet needing much schooling.....	609-11	191
Teaching the art of invention, and of general creativity.....	613-21	194
Instilling or allowing creativity in engineering education.....	622-34	197
Engineering students are taught to abhor the name of inventor.....	623	197
The classical engineering course teaches mathematical and convergent thinking, opposite to invention.....	625-9	198
Remedies for the situation, especially education.....	629-34	199
Better scheduling for the engineer's life.....	635-41	202
Inventors' ages, and when best.....	640	203
Suggestions on handling inventors in laboratories.....	642-8	204
CITATIONAL NOTES.....		207
INDEX.....		233
