

AIR POLLUTION ENGINEERING IN LOS ANGELES COUNTY

(By Robert G. Lunche, Director of Engineering; Eric E. Lemke, Principal Engineer; Ralph L. Weimer, Air Pollution Engineer; Julien A. Verssen, Air Pollution Engineer; Louis J. Fuller, Air Pollution Control Officer; and Robert L. Chass, Chief Deputy, Air Pollution Control Officer, July 1, 1966)

CONTENTS

	<i>Page</i>
Introduction.....	527
Legislative support.....	527
Prohibitions.....	530
Engineering control equipment.....	531
Electrical precipitators.....	531
Baghouses.....	531
Fume burners.....	531
Other solid material collectors.....	531
Scrubbers and washers.....	531
Vapor collection equipment.....	531
Absorbers.....	531
Adsorbers.....	531
Control program achievements.....	531
Engineering "firsts".....	535
Problems for further control.....	541
Motor vehicles.....	541
Fuel oil burning.....	542
Organic solvents.....	542
Conclusions.....	543
Photographic case histories (this section omitted; available in the committee files).....	543

LIST OF TABLES

Table

I. Contaminants prevented from entering Los Angeles County atmosphere from stationary sources in tons per day, as of January 1966.....	528
II. Emissions of contaminants into the Los Angeles County atmosphere from stationary sources in tons per day, 1948 and 1966.....	529
III. Los Angeles County "firsts" in air pollution control.....	536
IV. Typical costs of basic and control equipment installed in Los Angeles County.....	539
V. Emissions of air contaminants into the Los Angeles County atmosphere from motor vehicles.....	541
