more dependent on specialized equipment, however, it must be anticipated that they will have a somewhat higher overall rate of obsolescence. This point deserves emphasis, because much vocational education involves training in quite specific skills and the student who receives his training on out-of-date equipment will enter the market with a very serious handicap.

(c) Existing Capital Plant in the United States

As of 1965, based on reports from the States, 613 institutions, either completed or under construction, had been designated area voeducational schools. The distribution of these schools by State shown in table 2. The distribution by population size of city is not known.

Of these 613 schools, 144 represented new construction and 64 had been remodeled since 1963,² but information as to the age of the remaining schools has not been reported.

All of these area schools are publicly owned and are admieither by State or by local boards of education. Based on informrished by the States, their estimated total value in 1965 v million.

B. Costs and User Charges

There are substantial variations, both among regions and the same region, in the cost of constructing and equipping vc school facilities. Nationwide, in 1964-65, construction costs ranged

² Among the 208 newly constructed or remodeled schools were: 27 specialized high schools, 62 of comprehensive high schools, 76 technical or vocational schools, and 43 departments in in higher education. A similar breakdown by type for the remaining area schools is not available.
