1494 ELEMENTARY AND SECONDARY EDUCATION AMENDMENTS

in earlier years. The increased availability of positions in other occupations and the higher economic rewards of many of these positions may increase the loss to the profession of teachers presently employed as well as former teachers who would ordinarily be considering re-entry into the profession. This general economic condition may increase the demand for beginning teachers toward the levels estimated as the demand for both re-entering and beginning teachers, listed in column 4 of Table 23.

The estimates of the demand for teachers are based on the Adjusted Trend Criterion which includes the addition of 50,000 teachers expected to be employed as a result of the Elementary and Secondary Education Act of 1965. The estimated 20,000 new teachers to be added at the secondary-school level are not likely to be distributed among the subjects in the same proportions as have been observed in recent years in the assignments of new teachers. It may be more likely that larger proportions of these new teachers will be assigned duties in the English language arts, mathematics, "other" subjects, natural and physical sciences, industrial arts, homemaking, and fine arts than would be observed if the demand were created by normal staff enlargement and teacher turnover. Therefore, the estimates of demand in these subjects (Table 23) may be lower than the actual conditions while the estimates in other subjects may be higher than actual conditions.

Table 23.—Comparison of the estimated supply of beginning teachers with the adjusted trend criterion estimate of demand for beginning teachers and for new teachers in 1966, by level and high school subject

Estimated supply of beginning teachers (2) 61,959 82,294	Estimated demand for beginning teachers ² (3) 99, 636 481, 761	Estimated demand for new teachers 3	For beg teac Number (5) -37, 677		Number (7) —66, 433	Supply as percent of demand (8)

Based on an assumption that the proportions of 1965 teacher education graduates entering teaching positions by Nov. 1, 1965, in the 29 reporting States will be observed nationally in 1966-67.

Based on the increase in the total number of teachers to be employed in 1966-67, including the Elementary and Secondary Education Act of 1965, added to an expectation that beginning teachers will be needed to fill vacancies created by the departure of 5 percent of the teachers employed in the fall of 1965 whose positions are not taken by returning former teachers. Included in these estimates is a continuation of the trends in reduction of the number of teachers having substandard certification or overcrowded classes, and general improvement of staffing ratios.

Based on the increase in the total number of teachers to be employed in 1966-67 added to the number of vacant positions created by the departure of 8 percent of the teachers in the fall of 1965. Included in these estimates, also, is a continuation of the trends toward general improvement of staff qualifications and working conditions as observed in recent years.

Estimated demand among high school subjects based on the percent distribution of new teachers assigned to these subjects in the 29 States which reported this information for 1965-66.
