¹ Column vector of personal consumption expenditure coefficients which became endogenous for the last part of computations. Consumption coefficients obtained from row distribution of final demands: "The Interindustry Structure of the United States," Survey of Current Business, November 1964, Table I, p. 21.

² Row vector of labor input coefficients after adjusting for interest and dividends. Those marked with * were not adjusted for interest and dividends. Those marked ** had special calculations made for interest and dividends. Labor coefficients: sources used to obtain uninflated coefficients are given in Table A-10.
