¹ These figures are valid for the national industries on the regional, as well as on the national level. This is because demand for the output of a national industry, no matter where it is located, is a function only of the total U.S. demand for its output; thus, the percentage change in output (equal to the percentage change in employment) of that industry in each region will be identical.

NOTE.—In all tables an entry of zero followed only by a decimal indicates the cell is empty. An entry consisting entirely of zeros, with no blank space, indicates the cell contains a figure of negligible size.
