ITALIAN CIRCULATION TAX ON AUTOMOBILES

The present formula for computing the circulation tax effectively penalizes automobiles imported from the United States, which have a cylinder displacement generally larger than that of automobiles produced in Italy. The disadvantage to American cars is compounded by the fact that the high tax continues undiminished for the life of the car while its resale value diminishes sharply. This makes it virtually impossible to develop a used car market for U.S. automobiles or, for that matter, for any automobiles of larger cylinder displacement.

Import quotas for U.S. automobiles were abolished January 1962 and replaced with a nondiscriminatory automatic licensing system. However, as is shown by the persistently low volume of imports, the circulation tax, in addition to the relatively high Italian tariff, is a serious obstacle to the sale of American automobiles in Italy. Of some 33,800 foreign automobiles imported and registered in Italy in 1961, only 583 were manufactured in the United States.
