PARKE DAVIS LABORATORIES, S.A.E.

Madrid

Madrid, April 25 1973

Dear Colleague:

The arrival of the spring-summer season and the dietetic-hygienic changes, travelling, etc. associated with it, there is a significant rise in the incidence of enterocolitis, common and infectious.

Once more we would like to remind you that CHLOROSTREP offers a well proven efficacy and therapeutic safety to attack these processes. It is manufactured in capsules and liquid, which attacking by two fronts -local-intestinal and general, will produce a fast remission of the symptoms in your patients, avoiding at the same time any complication. We especially remind you that the liquid form is very useful for administration to children and old people.

We hope you will be very pleased with the results of our product. We are at your disposal for any matter related with our products.

Sincerely yours,

Dr. Ricardo Picatoste Merino
PARKE DAVIS, Medical Department.
