

Summary of reported cases

Case	Age, year	Sex	Basic disease	Dose, mg./kg.	Duration of Rx	Symptoms	Ocular findings	Outcome	Author
1	22	M	Bacterial endocarditis	2 months	Yellow; blurred vision	Decreased visual acuity; papillitis	Decreased visual acuity; papillitis	Vision normal	Gewin et al.
2	24	F	Ulcerative colitis and abscess	5½ months	Blurring vision	Decreased visual acuity; bilateral scotomata; edema of nerve fibers; appearance of new vessel on nerve head.	Decreased visual acuity; bilateral scotomata; edema of nerve fibers; appearance of new vessel on nerve head.	Vision normal	Wallenstein et al.
3	7	M	Bacterial endocarditis	1½ months	Cloudy vision; progressed to blindness.	Disks pale, blurred, edematous; numerous hemorrhages in various parts of fundi.	Disks pale, blurred, edematous; numerous hemorrhages in various parts of fundi.	Poor vision recovery.	Lasky.
4	32	M	Chronic melioidosis	21 months	2 episodes of visual complaints; blurred foggy vision; unable to read.	Decreased visual acuity; visual fields and fundi normal.	Decreased visual acuity; visual fields and fundi normal.	Vision normal	Prevatt et al.
5	44	M	Bacterial endocarditis	6½ months	Blurred vision, a feeling of "looking through a film."	Decreased vision; pericentral scotomata, constriction of visual fields bilaterally; edema of disks; dilated retinal veins.	Decreased vision; pericentral scotomata, constriction of visual fields bilaterally; edema of disks; dilated retinal veins.	Vision normal	Cole et al.
6	20	M	Melioidosis	Approximately 4 months	Blurred vision; inability to focus.	Papilledema: constricted visual fields.	Papilledema: constricted visual fields.	Vision normal	Joy et al.
7	37	F	Pyelonephritis	Approximately 12 months intermittently	Film in front of eyes.	Decreased visual acuity; scotomata bilaterally	Decreased visual acuity; scotomata bilaterally	Vision normal	Wilson.
8	31	F	Polycystic kidney, pyuria	Approximately 10 months	Failing vision	optic disks swollen, marked edema over maculae.	optic disks swollen, marked edema over maculae.	Vision slightly improved.	Wilson.
9	4	F	Cystic fibrosis	Approximately 15 months	Peering at objects	Decreased vision; myopic changes in retina and slight pallor of discs.	Decreased vision; myopic changes in retina and slight pallor of discs.	Poor vision recovery.	Keith.
10	2	M	Cystic fibrosis	27-53 months	Sat close to TV; had trouble feeding himself.	Decreased vision; exotropia; optic atrophy bilaterally.	Decreased vision; exotropia; optic atrophy bilaterally.	Vision normal	Leitman et al.
11	4	M	Cystic fibrosis	59 4½ months	Fell over toys; had trouble feeding himself.	Decreased visual acuity; bilateral central scotomata; blurred disc margins, and tortuous vessels.	Decreased visual acuity; bilateral central scotomata; blurred disc margins, and tortuous vessels.	Counts fingers at 2-3 feet.	Leitman et al.
12	5	M	Cystic fibrosis	40 8 months	Sat close to TV; held objects close; had difficulty finding toys.	Decreased visual acuity; bilateral central scotomata; blurred disc margins, and tortuous vessels.	Decreased visual acuity; bilateral central scotomata; blurred disc margins, and tortuous vessels.	Vision normal	Leitnam et al.
13	6	M	Cystic fibrosis	41 9 months	Sat close to TV; could not recognize brother at 10 feet.	Decreased visual acuity; blurred and elevated disc margins; tortuous veins, clumping of macular pigment.	Decreased visual acuity; blurred and elevated disc margins; tortuous veins, clumping of macular pigment.	Vision normal	Leitnam et al.
14	6	F	Cystic fibrosis	54 8 months	Held objects close.	Disc blurred, hyperemic, and elevated; vessels tortuous; peripapillary capillary dilatation with hemorrhage.	Disc blurred, hyperemic, and elevated; vessels tortuous; peripapillary capillary dilatation with hemorrhage.	Remained on chloramphenicol; counts fingers at 6-7 ft.	Leitman et al.
15	6	M	Cystic fibrosis	45-60 3½ months	Held objects close, had difficulty seeing blackboard in school.	Decreased vision; retinopathy of cystic fibrosis and optic neuritis.	Decreased vision; retinopathy of cystic fibrosis and optic neuritis.	Vision normal	Leitman et al.
16	5	F	Cystic fibrosis	57 6½ months	Did not read or watch TV	Marked reduction in vision; central scotomata.	Marked reduction in vision; central scotomata.	Vision improved	Present report.
17	17	F	Cystic fibrosis	49 16 months	"Light spot in front of eyes," difficulty in seeing.			Vision normal	Present report.
