

with
Vibramycin
doxycycline

The lowest effective dose—
 once a day after the first day
 the key:
Long half-life

Half-life of Vibramycin is significantly longer than that of other agents—
 based on single dose studies.

*With multiple dosing, the cumulative half-life has been reported to be approximately 52 hours.

Vibramycin owes its long half-life to slow renal clearance...
 is that of DMCT, 1/4 that of tetracycline.

Average Renal Clearance (as a per cent of creatinine clearance)	
doxycycline	12.0%
demethylchlortetracycline	25.0%
tetracycline	61.0%
