

Serum concentrations of Vibramycin peak at a rate which approaches that of a tetracycline I.M. injection, indicating the great absorption of Vibramycin from the G.I. tract.

Long half life and slow urinary clearance of Vibramycin make possible a once-a-day dose after the first day.

FOR MORE SEVERE INFECTIONS, 100 MG. EVERY 12 HOURS IS RECOMMENDED.

The lowest daily dose of any oral tetracycline.

MINIMAL DOSE RELATED LOWER G. I. SIDE EFFECTS OBSERVED THUS FAR.

May be administered with meals or milk without significant loss of activity.

ANTIMICROBIAL SPECTRUM WHICH IS COMPARABLE TO OTHER TETRACYCLINES.
