

APPENDIX I

[From The New England Journal of Medicine, vol. 279, No. 23, Dec. 5, 1968]

BRIEF RECORDING

ACUTE RENAL FAILURE AFTER DRIP-INFUSION PYELOGRAPHY¹

Lawrence A. Bergman, M.B., B.Sc., M.R.C.P. (Lond.),
Maceo R. Ellison, M.D., and George Dunea, M.B., M.R.C.P. (Lond. & Ed.)

Drip-infusion pyelography, first described by Schenker² in 1964, has become widely used to evaluate renal size and exclude urinary obstruction in patients with renal insufficiency. The procedure is usually done without prior dehydration, and serious side effects have not been reported.
