

"Anatomical Chromographs of the Human Male and the Human Female" was distributed at the school dormitory and contains no advertising.

The "Atlas of Diagnostic Microbiology," from Abbott Laboratories, was, again, distributed in the laboratory and contains no advertising.

A monograph by Upjohn Co., "Diabetes," was distributed through the administration. Sections of this book are devoted to the treatment of diabetes with Upjohn products. Package inserts for these drugs are reprinted at the end of the book.

"Human Mycoses," a monograph by the Upjohn Co., was distributed in the laboratory without the knowledge of the administration.

Drugs are recommended for the treatment of the various mycoses. The book downplayed the role of antibiotics, steroids, and certain other drugs in the rising incidence of systemic fungal infections.

Mr. SPIEGEL. I would just like to point out that that seems to be a clear case of misinformation in the so-called educational material that we are receiving, that while later in the book they refer to the fact that drugs, although they soft-pedal certain drugs, can give rise to systemic fungal infections, when talking about the increase in these infections in the country, now they list two reasons—that is, better detection and better transportation—which they claim is spreading fungi around more, and they do not mention the fact that the tremendous increase in antibiotic drugs and others is causing a large part of the increase in the fungal diseases, and I think that is a clear area of misinformation.

Senator NELSON. Will you identify yourself for the reporter so the record will show who you are.

Mr. SPIEGEL. Yes. David Spiegel.

Senator NELSON. If at any time any of you wish to make a comment, state your name so the reporter will have it correct for the record.

Go ahead.

Mr. NATHAN. Among educational aids which we received was a rubber model of the human brain stem which was distributed by faculty members in class from Warner-Chilcott Laboratories.

A record, "Auscultation of the Heart," was provided by a lecturer.

A boxed set of 10 records on auscultation of the heart from Merck Sharpe & Dohme was distributed through various tutors at the teaching hospitals.

A statement that Merck Sharpe & Dohme provided these records introduces and concludes each of the records.

We have received a black bag from the Eli Lilly & Co., containing a stethoscope, percussion hammer, a tuning fork, and a tape measure. These items were all distributed through the class officers.

The Lilly name is stamped on each of these items.

It cost students in our class about \$50 apiece to replace these items at our own expense. However, we recognize that the cost to Lilly must have been considerably less.

Mr. GORDON. May I ask a question here.

Let us go back to the bottom of the previous page where you talk about the Upjohn Co. putting out a book on diabetes. Now, as I understand it, Upjohn has Orinase as one of its leading products from which it gets a large part of its income.
