*Breakdown by "best estimate" derived from adjustment of custom district reports.

**W.Washington and W.Oregon overall log production estimated in December 8, 1967, USFS report; all other log production figures are prorated from this total.

Note: This 1967 table is based on the assumption that 50% of 500 MM increase in log exports estimated for 1967 comes from Federal lands. The industry claim that the "great majority is Federal" is doubtful. First three-quarters of 1967 show no shift in distribution by state.
