

Mr. BLATNIK. Time is running out on us. Mr. Linko, would you proceed with your presentation?

Mr. LINKO. Yes. I better get going.

Here you see two concrete stanchions that must be 21½ feet in diameter and about 2 or 3 feet high, capable of wiping out any car. There is no good reason for the sign to be at this location. They put in a second hazard close to where one already exists—the roadsides are saturated with this type.

As you see, it says "one-half mile." A little further you see a natural hazard, a bridge abutment and embankment. I feel the better place to put this would be at the bridge. I cannot understand why they put it in here. If anyone hits that, he is finished.

Here is another one, right in the shoulder.
(Slide.)
