

Take a look at this small sign and massive concrete and everything. The guardrail is not even protecting the concrete stanchion, because you can run right behind it.

Mr. W. MAY. Mr. Prisk, could you give us an estimate of what that supporting structure for that small sign might cost?

Mr. PRISK. I would say \$5,000 or \$6,000.

Mr. W. MAY. So if we put that small sign on the existing overhead bridge structure, we might have saved \$5,000 or \$6,000 and done away with a couple of hazards? Is that your point, Mr. Linko?

Mr. LINKO. That is right. The guardrail is not even protecting the concrete stanchion the way it is there. You can run right into it.
