

Here is a place where somebody snapped it off, and the aluminum shattered and there is a minimum of damage to your car. I feel we should consider this as standard equipment. In fact, we should make a standard on minimum shearoff on all poles along the highways. This way no unnecessary damage should be caused to an automobile. It is not more costly.

Here you see them defeating the purpose. They put a big concrete stanchion underneath these things.

Mr. W. MAY. This is an aluminum breakaway light pole put on a concrete pedestal?
