

and here we have assumed that all such knitted cloth of wool went into knit outerwear, though some part of it must have been consumed in other non-knit-outerwear use. Domestic production is thus somewhat overstated.

The only further adjustment of these two wool figures from the Department of Commerce sources is to diminish the yarn poundage by a waste factor of 20 per cent to derive the net weight of finished garments.

With (a) the total weight of all knitted outerwear production based on the data of the National Cotton Council, and with (b) the total portion thereof consisting of cotton given in the same source, and with (c) the weight of wool knitted outerwear derived from the Department of Commerce reports in the manner indicated above, we have then been able to subtract (b) and (c) from (a) thus to obtain (d), the remainder which represents the man-made component.

The 20 per cent waste factor applied to yarn consumption represents a generalization of industry experience.

APPENDIX B

ESTIMATED END USE CONSUMPTION OF GRAY YARNS OF ALL FIBERS IN THE PRODUCTION OF KNITTED OUTERWEAR 1960-67

[In millions of pounds]

Type of product	1960	1961	1962	1963	1964	1965	1966	1967 ¹
Sweaters.....	95	97	101	102	102	113	114	92
Knit outerwear shirts.....	56	54	55	52	72	89	96	100
Sweatshirts.....	32	35	42	39	48	55	66	64
Knit swimwear.....	6	7	8	7	12	14	14	15
Knit dresses.....	2	2	2	2	5	² 51	² 56	59
