

Mr. BROOKS. Some factual data in terms of the number of hearings and the general activities?

Mr. PAGLIN. Those things we—they are not yet automated. Our Management Information Division has a whole series of management data which we provide to the staff and to the Commissioners.

For example, we have a monthly report on pending applications.

Mr. BROOKS. This is part of your management information so you know how many applications you have?

Mr. PAGLIN. That's right.

Mr. BROOKS. So you can find out how long you are taking to do this, how many people will have 14 television stations, six newspapers and 40 radio stations?

Mr. PAGLIN. That is available.

Mr. BROOKS. How many they control or own or exercise influence over?

Mr. PAGLIN. We can pull that out easily; yes, sir.

Mr. BROOKS. You can do that now?

Mr. PAGLIN. We can do some of that now—we do have some data—all is not yet on the computer.

Mr. HYDE. It's on——

Mr. BROOKS. Does it involve the entire structure and not just the financial area? Are you contemplating putting the actual data into it so you can get this information ready and available to your hearing examiners and to the Commissioners?

Mr. PAGLIN. You are referring to all kinds of information?

Mr. BROOKS. That's right.

Mr. PAGLIN. Or ownership information?

Mr. BROOKS. Well, ownership and efficiency of operation, and coverage and hearings, and how many people have television—all the various aspects of it.

Mr. PAGLIN. Ultimately we would hope to get a great deal of this basic data—I think what you're referring to in terms of the industry——

Mr. BROOKS. That's correct.

Mr. PAGLIN. Data coming into computerized form. May I give you an example right now. We are working on a system—you mentioned hearing examiners and data available for them—we are working on a system whereby we will put on the computer an index system of all the Commission reports, precedents, actions, and so on, so that you can get a read-out in the digest index type of all the legal actions of the Commission and the hearing examiners. The lawyers, the Commissioners, the staff, and so on, can on a computerized basis, reach into and retrieve that data insofar as what has the Commission done in terms of precedents and policies.

Mr. BROOKS. And ownership and impact and all the other data that you can crank in. Do you have any time schedule on that?

Mr. HYDE. We have only recently put the ownership of broadcast facilities into it, and we did have some difficulty during what is called the transition period.

This came up in connection with some other hearings we had, but we think we resolved those problems, and you will be able to obtain information quickly as to the ownership of broadcast facilities.
