HISTORY AND PURPOSES OF REGIONAL MEDICAL PROGRAMS

On October 6, 1965, the President signed Public Law 89-239. It authorizes the establishment and maintenance of Regional Medical Programs to assist the Nation's health resources in making available the best possible patient care for heart disease, cancer, stroke and related diseases. This legislation, which will be referred to in this publication as The Act, was shaped by the interaction of at least four antecedents: the historical thrust toward regionalization of health resources; the development of a national biomedical research community of unprecedented size and productivity; the changing needs of society; and finally, the particular legislative process leading to The Act itself.

The concept of regionalization as a means to meet health needs effectively and economically is not new. During the 1930's, Assistant Surgeon General Joseph W. Mountin was one of the earliest pioneers urging this approach for the delivery of health services. The national Committee on the Costs of Medical Care also focused attention in 1932 on the potential benefits of regionalization. In that same year, the Bingham Associates Fund initiated the first comprehensive regional effort to improve patient care in the United States. This program linked the hospitals and programs for continuing education of physicians in the State of Maine with the university centers of Boston. Advocates of regionalization next gained national attention more than a decade later in the report of the Commission on Hospital Care and in the Hospital Survey and Construction (Hill-Burton) Act of 1946. Other proposals and attempts to introduce regionalization of health resources can be chronicled, but a strong national movement toward regionalization had to await the convergence of
