On annual basis.....									

⁴ Filed by 1 carrier on May 9, 1968, effective Aug. 1, 1968.

⁵ Not filed as at June 1, 1968. However, the FCC staff has been informally advised that this rate will be filed to become effective with opening of Florida/U.S. Virgin Islands 720-circuit cable expected early in early summer, 1968.

⁶ No change.

⁷ Teleprinter service not offered on Oct. 1, 1966.

⁸ Indicates that rate is for both terminals.

¹ The base date for determining further savings on voice and alternate voice data (AVD) circuits is Jan. 20, 1967, the effective date of the lower composite cable/satellite rates for voice-grade circuits. Oct. 1, 1966, is the base date for teleprinter circuits since no report of savings from rates changes for this type of circuit after that date has been computed. (See our report of savings to the Military Operations Subcommittee submitted with our letter of Apr. 4, 1967.)

² Except that data for 1 carrier is at June 30, 1967.

³ Where 100 words per minute (WPM) service has been leased (col. (2a)) the savings are computed on a rate of 110 percent of the rate for 66 WPM service. For example:

Europe:	\$9,000
15 to 66 WPM circuits at \$600.....	1,980
3 to 100 WPM circuits at \$600.....	10,980
Total savings.....
